

DATA 602: Project Proposal Rubric (15% of the Project Mark): Maximum Marks = 20

Project Proposal Component	Good Work	Satisfactory Work	Needs Improvement	Unsatisfactory	Marks
Purpose (1) and Topics to Investigate (3) (max of 5 points)	(5 marks) Provides specificity with respect to the domain under which the data investigation is housed; provides a specific research question clearly demonstrating what is to be investigated; guiding questions are suggested to assist in the statistical investigation reiterates guiding questions; how might this investigation be applied to the 'real-world' is hypothesized; the target population is clearly identified; associated population variables/features	(4 - 3 marks) A broad overview of the specific domain is mentioned, with details lacking; research questions are somewhat vague, rather than clearly specified; guiding questions are not 'too guiding'; vagueness to 'how' the investigation can be applied to the real-world; the target population is not clearly identified; variables/features are not clearly defined	(2 – 1 marks) Domain specificity is lacking; research questions are poorly outlined and lack specificity; little to no guiding questions to assist in the progression of the data analysis; little to no mention of how the results of the impending data analysis can be applied to the 'real-world'; population is assumed to be known – vaguely identified; features/variables are also 'assumed' to be known/not-identified	(0 marks) Purpose section is missing/has been generated by AI	

	under study are clearly defined				
Data (max 3 marks)	(3 marks) Data sources are provided. A detailed description of the methodology used to collect the data in the provided source is explained. Permissions to use are provided.	(2 marks) Data sources are provided. A brief, but non-specific description of how the data was collected is provided. Permissions are provided.	(1 mark) Data sources are provided; a description of how the data was collected is absent. No mention of permissions to use.	(0 mark) A source of the data is not provided.	
Statistical Methods to be Employed (max 10 marks)	(10 – 9 marks) Two different statistical methods covered in DATA 602 are demonstrated to be used; assumption – should the method/model have – are to be stated; an indication of how these will be checked is mentioned; appropriate data visualization methods to be considered/used in the exploratory data analysis are identified (apriori)	(8 – 6 marks) Two different statistical methods covered in DATA 602 are not specified; model conditions are “loosely mentioned”; how these will be checked is not mentioned; some appropriate data visualization methods to be considered/used in the exploratory data analysis are ‘floated’.	(5 – 3 marks) Two different statistical methods covered in DATA 602 are not used; there is little to no mention of the model conditions and how each will be verified; little mention of the types of appropriate data visualizations that are being considered in the exploratory data analysis.	(2 – 0 marks) Statistical methods to be used are not covered in DATA 602; or not considered. No mention of model conditions (and how they are to be verified); little to no mention of the types of data visualization methods that are being considered	
References	(2 marks)	(1 mark)	(0.5 mark)	(0 mark)	

(max of 2 marks)	List of references (data sets, articles, online resources) used/to be used is provided (this can be in list form).	Partially complete list of references (see box to the left) is provided.	Minimal number of references is provided.	List of references is absent.
